NEW PRODUCTS - 2008

## THE TRIFLOW

The brand new Triflow will out perform any intake on the market. There are two versions, stage I and stage II - both offering internal breathing. Stage I has a standard width filter while stage II has a wider filter and a billet aluminum tuned velocity stack.

The velocity stack smooths out the airflow while also covering the mounting screw holes. With stage II, it's like having the protection of Fort Knox without any restriction in airflow. Both units come in wrinkle black powder coat with a chrome cover plate included (for two different looks). A rain sock is also available at a low additional cost.

We can also do special color filters as well...and speaking of filters, these are the best - no oiling required, just clean and go.

Both versions are currently available for bikes up to the '07 delphi and for the new '08 & '09 drive by wire throttle body.

Give your bagger the best...or any model bike for that matter!

Completely and proudly made in the USA
